

## SYLLABUS

1. Data about the program of study

1.1	Institution	The Technical University of Cluj-Napoca				
1.2	Faculty	Electronics, Telecommunications and Information				
	Faculty	Technology				
1.3	Department	Bases of Electronics				
1.4	Field of study	Electronics and Telecommunications Engineering				
1.5	Cycle of study	Bachelor of Science				
1.6	Program of study/Qualification	Telecommunications Technologies and Systems/				
		Engineer, Applied Electronics/ Engineer				
1.7	Form of education	Full time				
1.8	Subject code	TST-E28.00, EA-E28.00				

### 2. Data about the subject

2.1	Subject name				Systems with Digital Integrated Circuits						
2.2	Subject area					Electronic devices and circuits					
2.3	Course responsible/lecturer					Prof.dr.ing. Sorin Hintea					
2.4	Teachers in cl	narg	e of a	applications	;	Assoc. Prof. Mihaela Cirlugea, PhD					
						Assistant Paul Farago, PhD eng.					
2.5	Year of study	Π	2.6	Semester	2	2.7	Assessment	Exam	2.8	Subject category	DID/DOB

#### 3. Estimated total time

Year/	Subject name	No.	Course	Арр	licatio	ons	Course	Арр	olicati	ons	Indiv.	_	
Sem.		of									study	-AL	dits
		weeks	[hours/week]		[hours/sem.]			n.]		101	Cre		
				S	L	Ρ		S	L	Р			0
II / 2	Systems with Digital Integrated Circuits	14	2		1	1	28		14	14	74	130	5

3.1	Number of hours per week	4	3.2	of which, course	2	3.3	applications	2	
3.4	Total hours in the curriculum	56	3.5	of which, course	28	3.6	applications	28	
Individual study Ho									
Manual, lecture material and notes, bibliography									
Supplementary study in the library, online and in the field									
Prepa	aration for seminars/laboratory v	vorks,	homew	ork, reports, portfo	lios	essays	;	38	
Tutor	ing							3	
Exams and tests									
Other activities									
3.7	Total hours of individual study		74					•	

0.7	rotal fields of fildfieldal study	/ -
3.8	Total hours per semester	130
3.9	Number of credit points	5

# 4. Pre-requisites (where appropriate)

4.1	Curriculum	N/A
4.2	Competence	Electric signals, passive components connection, electric circuit
		relations and theorems, capacitor and coil time and frequency
		behavior and frequency response

# 5. Requirements (where appropriate)

5.1	For the course	Amphitheatre, Cluj-Napoca
5.2	For the applications	Laboratory, Cluj-Napoca

## 6. Specific competences

Professional competences	Theoretical knowledge (what the student must know):	Internal structure of digital integrated circuits. Principal electrical DIC parameters. Signal propagations in DIC. Compensation methods of great capacitive charge effects. Design principles of digital VLSI circuits. Numerical circuit synthesis using VHDL language. Semiconductor memory functioning. Applications with semiconductor memories. Communication protocols with sequential synchronous circuits. PLA functioning. Pulse generators
	Acquired skills (what the student is able to do):	After completing the discipline, the students will be able to: - develop medium complex designs that contain gates, multiplexers, counters, registers, etc - to analyze and describe digital systems using VHDL language - to know the internal structure of DIC and their effects over the circuit real performances; delays in signal propagation, logic hazard, consumed power, area - to use specific DIC design environments, including those containing VHDL - to analyze circuit behavior from the signal propapagation point of view - to develop abilities for circuit design for optimizing their performances: small delay time, reduces power consumption and small area - to avoid logic hazard through design
	Acquired abilities: (what ype of equipment the student is able to handle)	<ul> <li>After completing the discipline, the students will be able to:</li> <li>use the lab instrumentation (power supply, oscilloscope, function generator, multimeter) for the experimental study of electronic circuits</li> <li>use the experimental boards</li> <li>connect the lab instrumentation with the experimental boards, in order to experimentally study electronic circuits</li> <li>use the computer to the numerical data obtained through the explorations</li> <li>store and analyze the numerical data obtained through the explorations</li> </ul>
	In accordance with Grila1 and Grila2 RNCIS	<ul> <li>C1. To use the fundamental elements regarding electronic devices, circuits, systems, instrumentation and technology</li> <li>C2. To apply basic methods for signal acquisition and processing</li> <li>C3. To apply knowledge, concepts and basic methods regarding computing systems' architecture, microprocessors, microcontrollers, programming languages and techniques</li> <li>C4. To design, implement and operate data, voice, video and multimedia services, based on the understanding and application of fundamental concepts from the field of communications and information transmission.</li> <li>C5. To select, install, configure and exploit fixed and mobile telecommunications equipment. To equip a site with common telecommunications networks.</li> </ul>
Cross	Grila1 and Grila2 RNCIS)	N.A.

# 7. Discipline objectives (as results from the key competences gained)

7.1	General objectives	Developing the competences regarding the use, analysis and (re)design of digital circuits and systems				
7.2	Specific objectives	<ol> <li>Recognizing and understanding basic concepts specific to fundamental electronic circuits.</li> <li>Developing skills and abilities necessary for the use of fundamental electronic circuits.</li> <li>Developing skills and abilities for the analysis and (re)design of digital integrated circuits.</li> </ol>				

# 8. Contents

8.1.	Lecture (syllabus)	Teaching	Notes	
-		methods		
1	Introduction in VHDL. Description of digital circuits in VHDL			
2	Internal digital circuit CMOS structures. CMOS functioning and	tive	_	
_	characteristics	em	ard	
3	Combinational and sequential circuits in CMOS VLSI	plic	00	
	technology. CMOS inverter and fundamental gates	y, 1	СК К	
4	Performance analysis of CMOS circuitry. Propagation time and	bn,	pla	
F	Orstinizing anod performances for CMOC VI SL circuite	atic e st	,	
с С	Optimizing speed performances for CWOS VLSI circuits	ific ase	ect	
0	Internal structures of bipolar digital circuits. The and sublamilies	n pl	J <u>o</u> i	
1	Logic nazard in digital circuits. Static and dynamic nazard, methods for	xer cise atio	D.	
0	Arithmetic operations Adders subtractors and multiplying CMOS	, e) erc	ion	
0	circuite	ion exe	Itat	
a	VI SI arithmetic circuits Adders subtractors and multiplying circuits in	sati ing	sen	
5	VHDI code	/ers	les	
10	Semiconductor memories, structures and organizing, ROM, PROM,	onv tea	otp	
	EPROM, EEPROM, FLASH memories, structures and configuration.	, c	đ	
	Electric and temporal characteristics	tior istic	of	
11	Dynamic and static RAM memories. Structures and characteristics	euri	se	
12	Semiconductor memories, extending the memory capacity	ser he ese	$\supset$	
13	Programmable logic arrays. Connection and memory capacity	pr		
	extension	ш.		
14	Pulse generators. Monostable circuits for digital signal processing;			
	interface and display			
8.2.	Applications	l eaching	Notes	
Lab	oratory	methodo		
1	Labour protection. Functioning parameters of CMOS and TTL			
	integrated circuits			
2		0		
	Signal propagation and response delay for CMOS integrated circuits	ctic		
3	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination	idactic	on, IS,	
3 4	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS	f, didactic	tation, uters,	
3 4	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits	oof, didactic rk	ientation, nputers, ird	
3 4 5	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM	proof, didactic work	umentation, computers, ooard	
3 4 5 6	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing	ntal proof, didactic m work	istrumentation, s, computers, ic board	
3 4 5 6 7	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test	nental proof, didactic team work	/ instrumentation, ards, computers, netic board	
3 4 5 6 7 Proje	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect	erimental proof, didactic e, team work	tory instrumentation, boards, computers, agnetic board	
3 4 5 6 7 Proju 1	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme	xperimental proof, didactic cise, team work	oratory instrumentation, tal boards, computers, :/magnetic board	
3 4 5 7 7 1 2	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme VHDL tutorial	d experimental proof, didactic xercise, team work	aboratory instrumentation, ental boards, computers, nite/magnetic board	
3 4 5 7 7 1 2 3	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme VHDL tutorial VHDL code description of design modules	and experimental proof, didactic exercise, team work	<ul> <li>Iaboratory instrumentation, rimental boards, computers, white/magnetic board</li> </ul>	
3 4 5 7 7 9 7 1 2 3 4	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme VHDL tutorial VHDL code description of design modules Obtaining the clock signals; oscillators, programmable frequency	tic and experimental proof, didactic exercise, team work	e of laboratory instrumentation, perimental boards, computers, white/magnetic board	
3 4 5 7 7 9 7 1 2 3 4	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme VHDL tutorial VHDL code description of design modules Obtaining the clock signals; oscillators, programmable frequency dividers. Synchronous and asynchronous frequency dividers	lactic and experimental proof, didactic exercise, team work	Use of laboratory instrumentation, experimental boards, computers, white/magnetic board	
3 4 5 6 7 7 9 7 9 7 1 2 3 4 5	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme VHDL tutorial VHDL code description of design modules Obtaining the clock signals; oscillators, programmable frequency dividers. Synchronous and asynchronous frequency dividers Detailed design of functional blocks I	Didactic and experimental proof, didactic exercise, team work	Use of laboratory instrumentation, experimental boards, computers, white/magnetic board	
3 4 5 6 7 7 1 2 3 4 5 6	Signal propagation and response delay for CMOS integrated circuits Logic hazard and it's elimination Arithmetic operations. Adders, subtractors and multiplying CMOS circuits Circuits with ROM and RAM CMOS oscillators and monostables for pulse processing Laboratory test ect Project structure and content. The project theme VHDL tutorial VHDL code description of design modules Obtaining the clock signals; oscillators, programmable frequency dividers. Synchronous and asynchronous frequency dividers Detailed design of functional blocks I Detailed design of functional blocks II	Didactic and experimental proof, didactic exercise, team work	Use of laboratory instrumentation, experimental boards, computers, white/magnetic board

# 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Competences acquired will be used in the following COR occupations (Electronics Engineer; Telecommunications Engineer; Electronics Design Engineer; System and Computer Design Engineer; Communications Design Engineer) or in the new occupations proposed to be included in COR (Sale Support Engineer; Multimedia Applications Developer; Network Engineer; Communications Systems Test Engineer; Project Manager; Traffic Engineer; Communications Systems Consultant).

#### 10. Evaluations

Activity type	10.1	Assessment criteria	10.2	Assessment methods	10.3	Weight in the			
						final grade			
Course		The level of acquired		<ul> <li>Summative evaluation</li> </ul>					
		theoretical knowledge and		written exam (theory		- E, max 10 pts.			
		practical skills		and problems)		50%			
Applications		The level of acquired abilities		- Continuous formative					
				evaluation		- L, max. 10 pts.			
				<ul> <li>practical lab test</li> </ul>		20%			
				-project evaluation		-P max. 10 pts.			
						30%			
10.4 Minimum standard of performance									
		L≥5 and E≥5 and	1 0,5I	E+0,2L+0,3P ≥ 4.5
